### **What Makes Our Online Courses Unique**

Our online scientific writing course is unique in that it's set up much like the seated classroom: the six modules of this interactive course includes

- A voiced lecture that covers the main topics of the lecture
- Multimedia window that provides examples, graphics, or video content
- Supplement that includes additional **discussion** of the lecture's points; **examples** that further explain or illustrate concepts, and **resources**, such as books, articles, and websites
- Weekly writing options
- Written feedback on work submitted for the entire six weeks
- A certificate of completion

### **Topics Covered**

**Module 1: Writing Fundamentals**

**Module 2: The Writing Process**

**Module 3: Using Language Effectively**

**Module 4: Meeting Reader Needs/Writing Supplemental Components**

**Module 5: Writing the Scientific Report/Building the Argument**

**Module 6: Writing and Editing Strategies**

**Cost: \$499 per person; discounts for multiple attendees**

### **How It Works**

Signing up is simple! You create an account at [www.hurleywrite.com](http://www.hurleywrite.com). Once you've signed up, the first module is uploaded for you. You have access to each module for one week, and at the end of that week, submit any work that you wish to get feedback on (you can use one of our weekly writing options or submit your own work). Our professional feedback focuses on advice that helps you hone and sharpen your writing skills.
